

FUTURE PROOF WITH DARKLIGHT™

In internet connectivity terms, there is no better connection than having pure fibre direct to your business premises. However, this has traditionally been prohibitively expensive, a 1Gb connection has been around £20k-£30k.

Not anymore.

*DarkLight, pure fibre connections from Exa Networks, start from just £299pcm**

*Paid annually

Symmetrical connections from 100Mb/s, 10Gb/s & beyond, means you receive the same upload as download speed. And, if your requirements change we can amend your bandwidth on-the-fly. This could be a permanent increase in bandwidth to accommodate greater use of cloud computing, growth or an increased use of rich media, or a temporary increase for a special event.

Everything is possible.

Couple this with our award-winning Customer Service and best-in-industry call answer times and you can see why Exa Networks is your ideal next business partner.

DARKLIGHT – THE DETAIL

DarkLight is a pure fibre connection direct to your business premises.

Delivered using our dark fibre network, the service is not limited by the traditional constraints of bandwidth purchasing or leased line capacity. Instead, you will receive a completely future-proofed service capable of accommodating all data, employee or infrastructure growth.

A DarkLight service is the only internet connection you will ever need to install.

Dedicated exclusively to your site, you will receive an uncontended line with a 1:1 contention ratio. As the connection is symmetrical, you will receive the same upload as download speed.

DarkLight connections have a standard installation time of 45 working days, and an SLA of 99.99% network uptime with an eight hour resolution time.

CONTENTION	PRODUCT	SPEED (SYMMETRICAL)	PRICE (PER MONTH)*
1:1	DarkLight 100	100Mbps	£299
	DarkLight 300	300Mbps	£349
	DarkLight 500	500Mbps	£399
	DarkLight 1000	1Gbps	£499

*Paid annually
